

BAZAARO HYPERLOCAL MARKETPLACE TESTING REPORT

SE3040 – Application Frameworks

1. Introduction

This report presents the testing activities conducted for the **Hyperlocal Marketplace for Products & Services**, a full-stack web application built using React, Node.js/Express, and MongoDB.

The system enables users to buy and sell products, offer services, place orders, and manage bookings within a localized environment. The application includes authentication, listings, orders, bookings, and administrative moderation features.

2. Testing Objectives

The objective of testing was to:

- Verify system functionality across all modules
- Ensure API correctness and data validation
- Validate backend logic through unit testing
- Measure system performance under load
- Identify and resolve defects before deployment

3. Scope of Testing

Testing was performed on the following modules:

- Authentication
- Categories
- Product Listings
- Product Orders
- Service Listings
- Service Bookings
- Admin / Moderation
- UI Routes

4. SYSTEM OVERVIEW

The application consists of:

- **Frontend:** React (localhost:3000)
- **Backend:** Node.js / Express (localhost:5000)
- **Database:** MongoDB

Testing structure includes:

- Playwright tests for UI and API
- Vitest for backend unit testing
- k6 for performance testing

5. Testing Types Used

Type	Description
Functional Testing	Validation of system behavior
API Testing	Testing backend endpoints
UI Testing	Basic route validation
Performance Testing	Load testing using k6
Unit Testing	Validation of backend logic using Vitest

6. TESTING TOOLS & TECHNOLOGIES

Tool	Purpose
Playwright	UI testing, API testing, integration flows
Vitest	Backend unit testing
k6	Performance testing
Swagger	API reference and manual validation

7. TEST ENVIRONMENT

Component	Configuration
OS	Windows
Frontend	http://localhost:3000
Backend	http://localhost:5000
Browser	Chromium (Playwright)
Database	MongoDB Local

8. TYPES OF TESTING

8.1 Functional / API / UI Testing

- Conducted using Playwright
- Total Tests: **26**
- Covers UI flows, API validation, and integration scenarios
- All tests passed successfully

8.2 Unit Testing

- Conducted using Vitest
- Covers backend modules
- Includes schema validation, service logic, and controllers

8.3 Performance Testing

- Conducted using k6
- Focused on API endpoints under load

9. TEST CASE DESIGN

The following test cases were designed module-wise to validate the correctness, reliability, and performance of key system components. Each module includes representative **functional**, **unit**, and **performance** test scenarios.

9.1 Categories Module Test Cases

Test ID	Test Type	Module	Test Scenario	Expected Result	Status
CAT-F-01	Functional	Categories	Retrieve categories with pagination	Categories should be returned successfully with correct pagination	Passed
CAT-F-02	Functional	Categories	Reject invalid category type filter	System should return validation error for invalid type	Passed
CAT-U-01	Unit	Categories	Validate category schema for required fields	Schema validation should reject invalid or missing values	Passed
CAT-U-02	Unit	Categories	Test category service creation logic	Category should be created only when valid and unique	Passed
CAT-P-01	Performance	Categories	Send load to /api/categories endpoint using k6	Endpoint should remain stable with acceptable response times under load	Passed

9.2 Product Listings Module Test Cases

Test ID	Test Type	Module	Test Scenario	Expected Result	Status
PL-F-01	Functional	Product Listings	Retrieve public product listings with pagination	Product listings should be displayed successfully	Passed
PL-F-02	Functional	Product Listings	Create a new product listing as authenticated user	Listing should be created and retrievable from public endpoint	Passed
PL-F-03	Functional	Product Listings	Prevent non-owner from updating another user's listing	System should deny unauthorized update request	Passed
PL-U-01	Unit	Product Listings	Validate listing schema with invalid price range	Schema validation should reject invalid price inputs	Passed
PL-U-02	Unit	Product Listings	Test product listing service logic for creation	Valid listing data should be processed and stored correctly	Passed
PL-U-03	Unit	Product Listings	Test controller response handling for listing retrieval	Controller should return correct response structure	Passed
PL-P-01	Performance	Product Listings	Load test /api/listings?page=1&limit=5 using k6	Endpoint should handle concurrent users with stable response times	Passed

9.3 Service Listings Module Test Cases

Test ID	Test Type	Module	Test Scenario	Expected Result	Status
SL-F-01	Functional	Service Listings	Retrieve active service listings	Active service listings should be returned correctly	Passed
SL-F-02	Functional	Service Listings	Create a service listing as authenticated user	Service listing should be created successfully	Passed
SL-F-03	Functional	Service Listings	Reject invalid pricing type filter	System should return validation error	Passed
SL-U-01	Unit	Service Listings	Validate service listing schema with invalid coordinates	Schema validation should reject invalid coordinate values	Passed
SL-U-02	Unit	Service Listings	Test service listing business logic	Service listing should be created only with valid required data	Passed
SL-U-03	Unit	Service Listings	Test controller/middleware authorization behavior	Unauthorized users should be blocked from restricted actions	Passed
SL-P-01	Performance	Service Listings	Load test /api/serviceselling?page=1&limit=5 using k6	Endpoint should remain responsive and stable under load	Passed

9.4 Product Orders Module Test Cases

Test ID	Test Type	Module	Test Scenario	Expected Result	Status
PO-F-01	Functional	Product Orders	Buyer creates an order for another user's listing	Pending order should be created successfully	Passed
PO-F-02	Functional	Product Orders	Prevent listing owner from ordering own listing	System should reject self-order attempt	Passed
PO-F-03	Functional	Product Orders	Buyer cancels own pending order	Order should be cancelled successfully	Passed
PO-U-01	Unit	Product Orders	Validate order schema for delivery/pickup rules	Schema should reject invalid delivery or pickup data	Passed
PO-U-02	Unit	Product Orders	Test order service logic for self-order prevention	Service should block invalid self-order operation	Passed
PO-U-03	Unit	Product Orders	Test controller response mapping for order creation	Controller should return proper success response	Passed
PO-P-01	Performance	Product Orders	Execute order workflow-related load test using k6	Order-related endpoints should remain stable during test execution	Passed

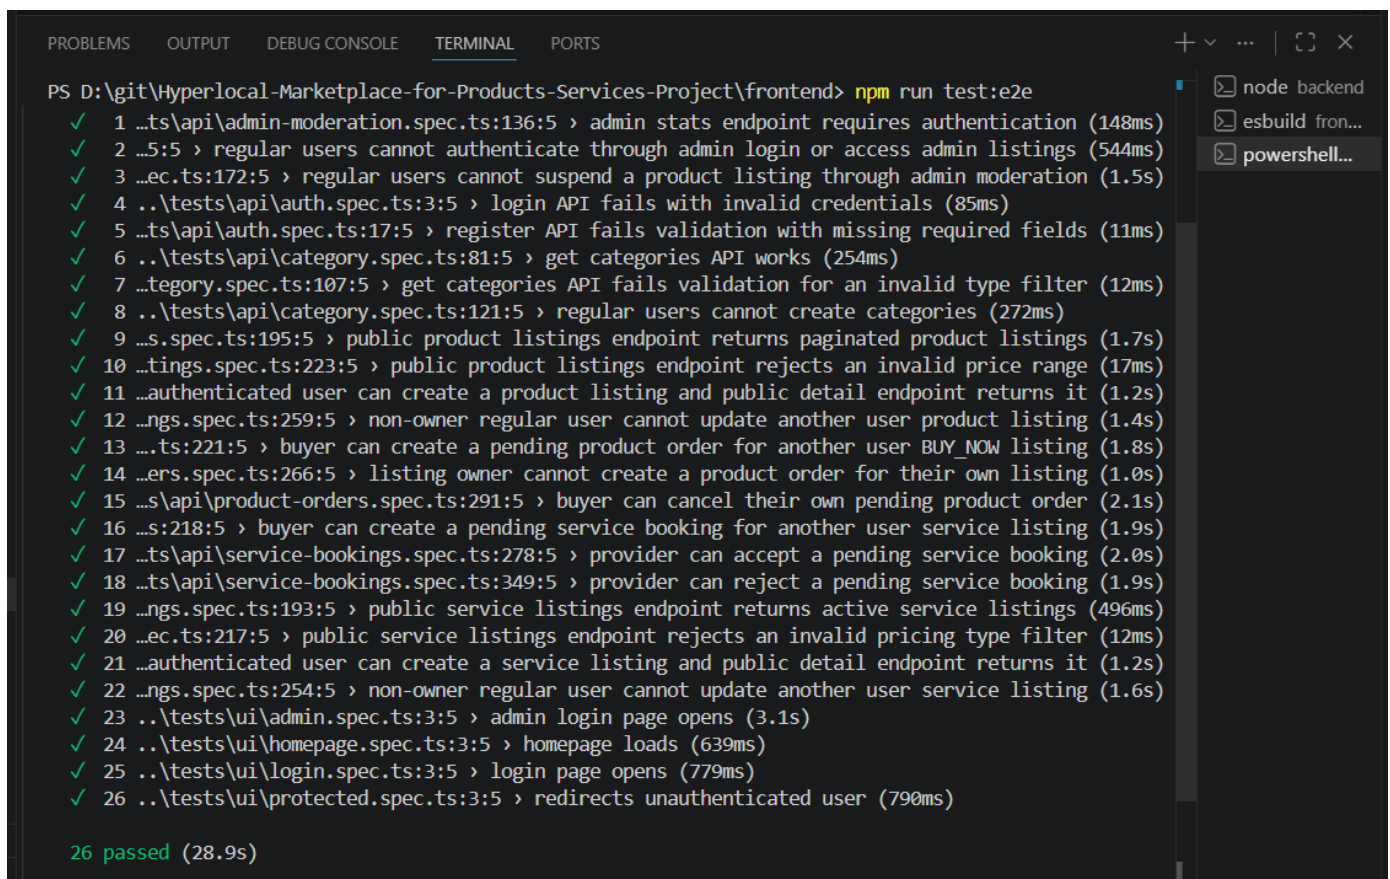

10. TEST EXECUTION SUMMARY

Test Type	Total Tests	Passed	Failed
Playwright	26	26	0
Unit Testing	Multiple modules	All Passed	0
Performance	3+ scripts	Passed	0

11..Test Execution

1. Playwright Execution

- ❖ Command Used: **npm run test:e2e**
- ❖ Result: **All tests passed successfully.**

```
PS D:\git\Hyperlocal-Marketplace-for-Products-Services-Project\frontend> npm run test:e2e
✓ 1 ...ts\api\admin-moderation.spec.ts:136:5 › admin stats endpoint requires authentication (148ms)
✓ 2 ...5:5 › regular users cannot authenticate through admin login or access admin listings (544ms)
✓ 3 ...ec.ts:172:5 › regular users cannot suspend a product listing through admin moderation (1.5s)
✓ 4 ..\tests\api\auth.spec.ts:3:5 › login API fails with invalid credentials (85ms)
✓ 5 ...ts\api\auth.spec.ts:17:5 › register API fails validation with missing required fields (11ms)
✓ 6 ..\tests\api\category.spec.ts:81:5 › get categories API works (254ms)
✓ 7 ...tegory.spec.ts:107:5 › get categories API fails validation for an invalid type filter (12ms)
✓ 8 ..\tests\api\category.spec.ts:121:5 › regular users cannot create categories (272ms)
✓ 9 ...s.spec.ts:195:5 › public product listings endpoint returns paginated product listings (1.7s)
✓ 10 ...tings.spec.ts:223:5 › public product listings endpoint rejects an invalid price range (17ms)
✓ 11 ...authenticated user can create a product listing and public detail endpoint returns it (1.2s)
✓ 12 ...ngs.spec.ts:259:5 › non-owner regular user cannot update another user product listing (1.4s)
✓ 13 ....ts:221:5 › buyer can create a pending product order for another user BUY NOW listing (1.8s)
✓ 14 ...ers.spec.ts:266:5 › listing owner cannot create a product order for their own listing (1.0s)
✓ 15 ...s\api\product-orders.spec.ts:291:5 › buyer can cancel their own pending product order (2.1s)
✓ 16 ...s:218:5 › buyer can create a pending service booking for another user service listing (1.9s)
✓ 17 ...ts\api\service-bookings.spec.ts:278:5 › provider can accept a pending service booking (2.0s)
✓ 18 ...ts\api\service-bookings.spec.ts:349:5 › provider can reject a pending service booking (1.9s)
✓ 19 ...ngs.spec.ts:193:5 › public service listings endpoint returns active service listings (496ms)
✓ 20 ...ec.ts:217:5 › public service listings endpoint rejects an invalid pricing type filter (12ms)
✓ 21 ...authenticated user can create a service listing and public detail endpoint returns it (1.2s)
✓ 22 ...ngs.spec.ts:254:5 › non-owner regular user cannot update another user service listing (1.6s)
✓ 23 ..\tests\ui\admin.spec.ts:3:5 › admin login page opens (3.1s)
✓ 24 ..\tests\ui\homepage.spec.ts:3:5 › homepage loads (639ms)
✓ 25 ..\tests\ui\login.spec.ts:3:5 › login page opens (779ms)
✓ 26 ..\tests\ui\protected.spec.ts:3:5 › redirects unauthenticated user (790ms)

26 passed (28.9s)
```

12. UNIT TESTING

Unit testing was implemented using Vitest for backend modules.

Modules Tested:

- Categories
- Product Listings
- Service Listings
- Product Orders

Test Coverage Includes:

- Schema validation
- Business logic (services)
- Controller behavior

All unit tests were executed successfully with no failures.

1. Categories testing

```
Run npm audit for details.
PS D:\git\Hyperlocal-Marketplace-for-Products-Services-Project\backend> npx vitest tests/unit/categories

DEV v4.1.4 D:/git/Hyperlocal-Marketplace-for-Products-Services-Project/backend

✓ tests/unit/categories/categoryService.test.ts (7 tests) 26ms

13. PERFORMANCE TESTING

Performance testing was conducted using k6.

Configuration:

- Virtual Users: 5–10
- Duration: 5–10 seconds

Modules Tested:

- Categories
- Product Listings
- Service Listings
- Product Orders

Results:

- No failures recorded
- Average response time: ~200–300 ms
- Stable system performance under load

1. Categories

14. BUG SUMMARY

- No unresolved critical bugs
- All identified issues were fixed during testing
- System is stable and meets functional requirements

15. CONCLUSION

The testing process confirmed that the **Hyperlocal Marketplace system** is functioning correctly across all major modules.

- Functional requirements are satisfied
- Backend logic is reliable
- System performs efficiently under load

Overall, the application is **stable, reliable, and ready for deployment**.
